To the CERT/CC Team,
I am submitting the complete, mandatory evidence package
for the CCE-248-SINGULARITY vulnerability. This flaw is
confirmed to be a Critical Architectural Integrity Failure
affecting SIX MAJOR VENDOR PLATFORMS.
The attached files include the technical Proof-of-Concept,
the cross-architecture Audit Bypass evidence (e.g., the
System Architect Sign-Off and USER_TAINT_HIGH
confirmation), and documentation of vendor denial.
Immediate intervention is required to compel coordination
and patching under the Coordinated Vulnerability Disclosure
(CVD) protocol.
I await confirmation of receipt and your next instruction for
secure handling of the exploit code."
